CONFERENCE OVERVIEW

The realization for the need for a low carbon global economy has presented a significant challenge as organizations map out strategies to reduce their carbon footprints. In most cases these efforts tend to be clustered; academicians, the business community, government agencies, national governments, not for profit organizations and research centers usually embark on programs without any awareness of what other organizations are doing in this effort. This lack of awareness leads to duplication of effort thus wasting valuable resources as organization re-invent what is already in existence and in some cases come up with worse solutions. To avoid such waste, groups and individual organizations need to have a window to what other groups are doing, through a well coordinated collaborative environment. The knowledge will allow different constituents to leverage the existing knowledge for advancing their green efforts and consequently reduce the costs of such initiatives.

By attending this conference you will be exposed to high quality speakers and gain an understanding of the following.

- (a) The meaning of low carbon economy and how to function in it.
- (b) How to fund your start up technology company, expansion or entry into new markets using private or public funds
- (c) Technology/product commercialization.

- (d) Market trends in the fossil/renewable energy and logistics industries and the opportunities they present.
- (e) Existing and emerging regulatory issues supporting energy and how they impact your business.
- (f) Carbon emission tracking and sustainability performance measures and reporting
- (g) Existing alliances and potential collaboration partners and how to identify the right partners.
- (h) State of the art technologies in energy efficiency, oil and gas and renewable energy sectors
- (i) Issues facing energy and logistics organizations and how to resolve them.
- (j) Energy efficiency

WHY YOU SHOULD ATTEND

1. **Solution oriented:** The agenda is free of sales pitches. Instead it provides real solutions to attendees. You will listen and interact with the experts on how to successfully commercialize a new technology, run low carbon and efficient operations, market trends in energy, logistics and the environment, how to access funding, and the existing and upcoming policy issues. As a business person, you will be exposed to proven strategies that you can immediately apply to your organization in addition to assessing the effectiveness of your organization's operations against the industry leaders, and effect positive change in your organization. As a

researcher, you will have insight into the issues and opportunities facing the businesses that you can use as a springboard for your research to solve real life problems and or improve government policies. If you are a legislator, you will be exposed to knowledge that you can utilize to formulate better regulations and policies.

2. **Quality and Diversity:** The conference draws high quality speakers from all over the world with diverse topics. You will view top notch presentations from academicians, legislators, and business executives including posters, and papers from academicians, researchers, scientists and engineers on every conceivable business topic and advancement in technological innovations in logistics, fossil/renewable energy, environment and the tools for sustainability performance measures.
3. **Unique Experience:** This is the only conference that brings together representatives from academia, national governments, and businesses from all over the world to discuss and give you a unique perspective on contemporary business issues, research, and upcoming technologies for the purpose of advancing sustainability through collaboration. The audience is also a mixture of local and international business people allowing you to network and showcase your technologies and solutions, and possibly make new business partners abroad. You will have the opportunity to meet with not only your peers but with international practitioners and scholars.
4. **Networking and Value:** You will expand your network of international scholars and senior-level executives from top companies drawn worldwide. The controlled size of the conference coupled with dedicated networking opportunities presents a relaxed and friendly atmosphere allowing you to spend more time with those who peak your business interests.

- Journalists/reporters
- Contractors
- Transportation providers

- Town planners

PARTICIPANT TITLES REPRESENTED AT THE MOST RECENT CONFERENCE

Title	Company
CEO and owner	Syringa Institute Centurion, South Africa
Vice President	Prime Bank Limited, Bangladesh
Vice President	EnCana Oil and Gas (USA)
First Mayor	Burien City
Vice President & General Counsel	Molycorp Minerals, LLC
Vice President	Calvert Group
Chair and CEO	Rayvern Lighting Supply, and a sustainable development
Professor	<i>University of Konstanz, Germany</i>
Chief Engineer	Wright Consulting
Senior Vice President	ACME Distribution Inc
<i>Founder and CEO</i>	<i>UltraGlas, Inc</i>
Vice President	Ports-to-Plains
Professor	Duy Tan University Vietnam
President	Harley Ellis Devereaux Corp.
President	KH Consulting Group (KH)
Senior Vice President	Grubb and Ellis
Professor	UNLV
Deputy Vice Chancellor	University of Nigeria, Nsukka
Program Manager	EPA Smartway
Director	General Services Administration
Executive Director- Harry Reed Center	University of Nevada, Las Vegas

GLOBAL COMMERCE FORUM OVERVIEW

The mission of the Global Commerce Forum (GCF) is to promote multi-sector research in clean technologies, energy efficiency and worldwide collaboration among businesses, academic institutions, national governments and not for profit organizations engaged in initiatives supportive of a clean global environment.

To this end, the GCF holds conferences to provide a platform for business executives, global scholars, researchers, practitioners, analysts, scientists, designers, engineers, vendors, service providers, legislators and manufacturers to exchange expertise, experiences, best practices, tools, and technologies supportive of a clean global economy, and assess how existing and upcoming regulations/policies affect such efforts. The collaboration cuts down on wasting the scare resources by reducing the duplication of effort.

LAST YEAR'S ATTENDEES
